Guidance for other Retail Food Establishments under a Boil Order

Public water systems issue Boil Water notices to notify their users when the drinking water is not safe to consume. A boil water notice is issued when there is a coliform bacteria violation; when the water turbidity is over 5.0 NTU; when the water pressure is less than 20 PSI; or when there is a waterborne disease outbreak.

In the event of a boil order, a retail food establishment may not serve or prepare any food for the duration of the boil order. The establishment shall remain closed or shall close food service operations for the duration of the boil order. When the order is lifted, the establishment shall follow guidelines provided by Fannin County Health Inspector for resuming business after a boil order.
